

BYOx Program

Lockyer District High School is a 1:1 BYOx program in Years 8 to 12. Students in these year levels will need to attend school with their own device.

Students benefit from bringing their own digital devices to school for learning as they benefit from using the same digital devices at school and at home. Using a digital device enhances curriculum programs and improves student learning outcomes through increased access to digital tools, learning resources and pedagogy.

Individualised learning and differentiation for students and opportunities for students can be developed and students become responsible digital citizens with high-level digital skills.

Students will enjoy many benefits using their 1:1 laptop including:

- increased student motivation, confidence and engagement with learning
- greater autonomy in the classroom;
- the maturing of students as digital citizens who embrace digital opportunities and responsibilities;
- the normalising of technology use between the school and home;
- greater opportunity for inter-school collaboration.

What if I cannot afford a device?

Students who are unable to afford a 1:1 device will be able to pay an additional resource fee and receive an allocated device to check-in-out daily. Students will need to attend the Technicians Room at the start of each school day to check out their laptop device. Students are **not permitted** to take these laptops home and must return the allocated device at the end of each school day.

I have my device, what now?

The school will supply Internet and Network access while at school. Students can on-board their laptop anytime at home by following the instructions located on the school's website.
